Why a tube?

Today's marketers are demanding packaging which is:

- Consumer-preferred and easy to use
- Economical
- Ecological and safe
- Attractive
- Provides options to differentiate on the shelf
- Easily identifiable

The tube delivers these attributes:

- Taking into account purchase price per unit, filling, warehousing, and transportation, the tube can be less expensive than a bottle, tottle, jar or pump.
- Consumers appreciate that over 90% of the product in a tube can be easily dispensed and used.
- The tube weights vary little vs. competing packages, is recyclable (if all plastic or aluminium, and given an established recycle stream).
- The tube can be customized at minimal cost with options in materials, shape, closures, decoration, pigmentation, tube finishes and coatings.
- Market studies have confirmed consumers prefer tubes! It's easy to store, easy to use, portable, durable and attractive

Contact us
